

# CONFORMA LUX

## ADAPTIVE CHEST COMFORT SYSTEM

Earthlite is proud to introduce the Conforma Lux™ Adaptive Chest Comfort System. This patent pending comfort innovation takes existing breast comfort systems to a whole new level. The design features an adaptive recess area that conforms to the unique shape of each individual, aiding in spinal alignment, reducing pressure points and chest discomfort during face down treatments for both men and women.

Our design team eliminated the hard fixed cavity of current systems with an adaptive recess system (ARS™) that is integrated into the cushioning system. With smooth, one-touch electronic adjustments, clients are able to tailor a luxuriously padded recess, ensuring maximum comfort and optimized spinal alignment. The compact Conforma Lux™ Adaptive Chest Comfort System is now available on the Ellora™ treatment tables.

### Relieves Face Down Chest Discomfort

Creates an adjustable soft, padded recess to eliminate chest discomfort.

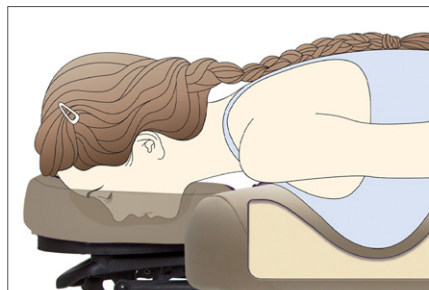

### Integrated and Adaptive

Buried within our luxurious mattress is the patent pending Conforma Lux adaptive recess system (ARS™), which enables one-touch micro-adjustments to conform to each individual's natural body shape with no hard edges or seams.

### Discrete, Client Controlled Electronic Adjustments

A conveniently placed, intuitive one-touch control enables discrete electronic micro-adjustments by the client. Even through sheeting, the elegantly simple electronic control is easy to reach and use.

### Improves Spinal Alignment

Full chests can create spinal alignment issues when face down. The Conforma Lux addresses this issue by creating an adaptive recess underneath the client's chest to improve spinal alignment.
